*DROP FRAME FLEXIBILITY, BECAUSE EVERY ROUTE IS DIFFERENT*

Introducing the Expert Series, the most versatile waste collection vehicle on the market. Since 1984, we've been performing our own factory drop frame modifications, enabling us to offer customized solutions to meet our customers' unique needs.

The Expert is designed for efficient waste collection, whether it's manual, semi-automated, or fully automated. Hopper access from both curbside and street side makes it easy to collect waste in alleys and one-way streets. With various configurations and numerous options available, it's hard to find a situation where the Labrie™ Expert wouldn't be a perfect fit.

## Laying the foundations for a truly exceptional product.

### LABRIE™ INNOVATIONS

With a strong emphasis on innovation, Labrie's engineering team has crafted a comprehensive range of customizable options to cater to even the most stringent customer requirements. We are poised and eager to embrace emerging industry trends and fulfill evolving customer demands. This perpetual cycle of innovation positions Labrie™ as the forefront leader in side loader solutions across North America.

### WEIGHT DISTRIBUTION

Over years of innovation, Labrie™ trucks prioritize ideal weight distribution in all models. Our ongoing objective is to achieve the perfect material balance, ensuring models collect more waste while maintaining the highest legal payload.

The rounded, tapered shape of the body maximizes compaction by concentrating material at the back.

### **IN-HOUSE DROP FRAME MODIFICATION**

Labrie™ is the only manufacturer that conducts the drop frame modification process in-house. This gives us direct control over the process, ultimately benefiting our clients.

### **MANUAL, SEMI-AUTOMATED OR AUTOMATED COLLECTION**

The Expert drop frame configuration excels in manual or semi-automated waste/recycling collection, featuring a low loading height.

### **SPLIT BODY VERSATILITY**

50/50, 40/60, or 60/40-split configuration for maximizing payload and adapting route diversion rates.

### **SINGLE SHEET OF STEEL ON THE BODY SIDES**

Enhanced strength and a seamless canvas for graphics, providing greater structural integrity, eliminating the need for reinforcement posts, and reducing the potential for weld seam cracks & corrosion.

### **SPLIT CHUTE INSIDE THE HOPPER**

On comingle units, the split chute is controlled by a hydraulic cylinder, and can be reconfigured on-the-go from within the cab.

### **ENCLOSED HOPPER**

Ideal for preventing waste from flying onto the road and for keeping water, snow, and ice from accumulating overnight.
